

Budget Pricing User Guide for Mobile

The Budget Pricing Tool is a useful way to estimate the price of a partial nomenclature for a linear product before adding the final configuration to the basket. Here are a few things to note:

- This is a role-based tool, reach out to your local Agency Admin for role assignment
- The Budget Pricing Tool is only for Linear Products
- The Budget Pricing Tool only appears when there is a Partial Nomenclature
- The price does not constitute a quote, it is only for budgetary purposes
- The Budget Pricing Tool can be accessed on desktop via agile and mobile via agilemobile

1. Log into agilemobile, click on the Configurator icon in the bottom right corner or use the top right menu bar and click on the Configurator from there

2. Begin by selecting a Linear Product to configure
3. Configure Linear Plan
4. Use the dropdown arrow to view the Budget Pricing Tool icon
